

# Quality Control for Fruit Processors

ERP capabilities built for food safety, compliance, and operational insight.

## The Industry Challenge

Fruit manufacturers operate in a highly variable and regulated environment. Product quality can change by season, supplier, growing conditions, and handling methods. At the same time, food safety requirements continue to increase, and customers expect consistent quality and full traceability.

Many fruit processors still rely on manual inspections, paper logs, spreadsheets, or disconnected quality systems that are difficult to maintain and even harder to analyze. Quality data is often captured after the fact, stored in multiple places, and disconnected from production, inventory, and lot history.

When quality systems do not integrate with daily operations, teams spend valuable time chasing information, preparing for audits, and reacting to issues instead of preventing them. Errors, rework, and missed trends become costly risks to both margins and brand reputation.

## The goNorthScope Solution

goNorthScope Quality Control is built specifically for fruit manufacturers and value-added processors who need quality systems that work in real production environments.

Instead of treating quality as a separate system, goNorthScope embeds quality control directly into the ERP platform. Quality data is captured in real time and connected to production runs, lots, inventory, and suppliers.

The result is a quality control solution that supports food safety, simplifies compliance, and gives operations and quality teams the visibility they need to act quickly and confidently.

## Key Benefits

- **Reduced manual effort:** Automate data collection and eliminate redundant entry
- **Improved audit readiness:** Maintain complete, digital HACCP and quality records
- **Faster issue resolution:** Identify root causes quickly using lot-level data
- **Lower risk:** Replace outdated, error-prone processes with standardized workflows
- **Better decisions:** Use quality data to improve operations, not just compliance

## Core Capabilities

### Process & Workflow Automation

Standardize quality processes and reduce manual work through configurable workflows.

- Automate repetitive quality tasks and inspections
- Capture data directly from IP scales, sensors, barcode scanners, and other devices
- Enforce quality checkpoints at critical control points
- Reduce reliance on paper, spreadsheets, and tribal knowledge

### Quality Data Collection & Storage

Maintain a complete, centralized quality record for every product and lot.

- Store process controls, measurements, and machine conditions
- Track maintenance procedures and environmental conditions
- Record quality tests, inspections, and bacterial sweeps
- Secure, searchable, and audit-ready data storage

### Regulatory Compliance & Food Safety

Support HACCP and audit requirements without manual filing systems.

- Digitize HACCP plans and supporting documentation
- Maintain inspection records tied directly to lots and production runs
- Prepare for audits with complete traceability and documentation
- Reduce audit risk with consistent, standardized records

### Metrics & Quality Analysis

Turn quality data into insight that supports better decisions.

- Identify trends across suppliers, products, and processes
- Quantify quality issues tied to specific lots, vendors, or packaging
- Analyze labor efficiency and process performance
- Access quality data without relying on outside consultants

## Why goNorthScope?

Generic quality systems are built to work alongside ERP platforms. goNorthScope Quality Control is built into the ERP itself.

That integration eliminates data silos, reduces manual reconciliation, and ensures quality information is available to operations, finance, and leadership in real time. Features evolve based on feedback from real food manufacturers, and support comes from a team that understands the realities of fruit processing.

## Get Started

If you are evaluating quality control solutions for your fruit operation, choose a system designed to fit your processes instead of forcing your team to adapt to generic tools.

goNorthScope helps fruit manufacturers strengthen food safety programs, simplify compliance, and gain operational insight without disrupting how work gets done.
